Hello,

The following submission has been created.

Track Name: Next-Generation Computing and Applications

Paper ID: 1379

Paper Title: The Impact of Genetics and Environmental Factors on Chronic Lung Diseases

Abstract:

Fibrosis, chronic respiratory failure, and pulmonary hypertension are caused by more than 200 distinct respiratory illnesses known as interstitial lung diseases (ILDs), which impact the lung parenchyma. Smoking, a history of chronic illness, allergies, and pollution exposure are some of the environmental and genetic variables that interact to cause these disorders. Disease progression is also influenced by psychological and emotional factors, such as weariness, peer pressure, and anxiety. Early detection of ILDs is challenging because of their vague symptoms and delayed diagnosis. The study examines how environmental, lifestyle, and demographic factors affect the onset and progression of ILD and novel ant-fibrotic treatments that can decrease the disease's progression. To improve patient outcomes, treatment plans, and diagnostic precision, it is essential to comprehend these risk variables.
